

Deltium BioTech

A Deltium Technologies Company

AUTHOR	Izzy
DOCUMENT NAME	Cellius-A
DATA CLASSIFICATION	<u><i>Top Secret</i></u>
ADDITIONAL INFO	<u><i>BASE</i></u>

1.1 - INFORMATION

The Cellius-A is the first variant in the Cellius series, designed by Deltium BioTech. It serves as a start for all of our future airborne infection viruses. This version introduces the DNA Tree which will be our standard for future bioweapons.

Coughing

Symptoms may include coughing, which has the ability to infect other players. This is indicated by a white ball that extends outward.

Airborne Spreading

The base includes a spreading feature which only works when DNA Method Coughing is 1. The virus then flies through the air toward the nearest victim, claiming another victim. This can improve spreading by a lot, however use it wisely.

1.2 - DNA
